On the proper care and feeding of wild caught data

Mon 25th May - Sun 31st May

It's our last week of wild caught data lectures!

It's gone so fast, but hopefully you've enjoyed lectures and will come away with many new skills important for your future careers.

Seminar:

We'll recap a few of the things we've learnt so far and review best practice principles of data curation.

Tutorial:

This as a chance to discuss assignment 4 ideas with your tutor.

You'll also take time to think about important data curation takeaways from the unit.

Workshop

We'll review the marking rubric and blog post examples so you have an idea of what to deliver on assignment 4.

Consultation:

Run as normal, both online and in person. Please make sure you attend your tutorial before coming for one-on-one advice and also tune into the workshop. This will help streamline the communication.

Assessment:

- Assignment 4 early check in is due end of the week

- Assignment 3 is being marked and results will be out this week

****Help:****

Remember the discussion board is always there should you have questions.
